1. A stabilizer for an active substance, such as a pharmacon, comprising a fructan having a number-average degree of polymerization of at least 6 in the form of a sugar glass.
  2. A stabilizer according to claim 1, wherein the fructan has a number-average degree of polymerization of at least 10.
  3. A stabilizer according to claim 1, wherein the fructan is inulin.
  - ✓ 4. A method for stabilizing an active substance, such as a pharmacon, wherein the pharmacon is incorporated in a sugar glass of a fructan having a number-average degree of polymerization of at least 6.
  5. A method according to claim 4, wherein the fructan has a number-average degree of polymerization of at least 10.
  6. A method according to claim 4, wherein the fructan is inulin.
  7. A method according to claim 4, wherein the sugar glass is formed by spray-drying, vacuum-drying, or freeze-drying.
  8. A stabilized active substance, such as a pharmacon, obtainable by a method according to claim 4.
  9. A pharmaceutical preparation comprising a stabilized active substance according to claim 8.
  10. A pharmaceutical preparation according to claim 9 in the form of a tablet, capsule, lozenge, dermatic, suppository, powder for pulmonary administration, or a rod or suspension for subcutaneous or intramuscular administration.
